

Custom Acrylic Pens

The acrylics used in your pen are man made products. Acrylic products come in a wide selection and care is made to use only the finest quality in making my pens.

- Acrylics are more tolerant to extremes in temperature, both hot and cold, and are therefore much more stable in these conditions.
- However, acrylic products are more brittle and can crack or chip if dropped. So please exercise care and try not to drop your pen on a hard surface.
- Use a plastic polish to revive luster to your pen if needed. A light buffing with a quality rubbing compound can buff out light surface scratches.

- DO NOT leave your pen exposed to extreme temperatures or moisture. Do not leave in car.
- DO NOT use any water, household cleaning fluids and/or any abrasive substances(car wax) on any part of your wooden pen. The fluids and/or abrasives will damage the fine finish on your pen.
